

# Best of GlassBuild America

## Highlights among the window and door products introduced at the September exhibition in Atlanta

The following pages feature some of the noteworthy introductions at this year's GlassBuild America trade show targeting the flat glass processing and window and door manufacturing industry.

*Window & Door* offers expanded coverage online. Go to [www.windowanddoor.net](http://www.windowanddoor.net) and click on the GBA Products icon. There you'll find descriptions and photos of all the latest window and door manufacturing equipment, components and accessories introduced by suppliers at the show.

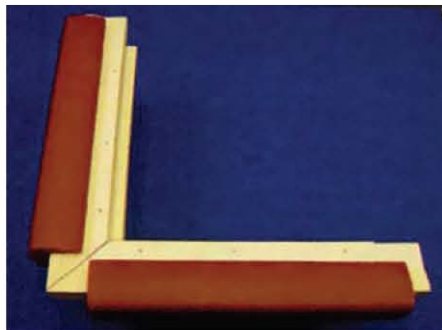

### INTERLOCK

The Concealed Magnetic Latch CML sash lock features a magnetic trigger system that enables it to provide "one-motion" window operation, according to the supplier. From InterlockUSA, the automatic locking hardware for double-hung windows is largely concealed within the profile and eliminates potential damage to divided lites.

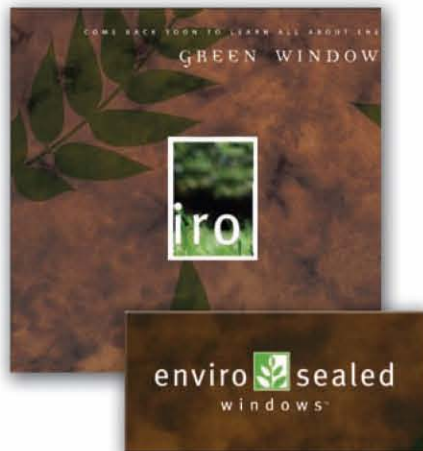

### WISP

The WISP (window integrated storm protection) system incorporates a Veka vinyl window installed into a vinyl receptor, which also houses a roller shutter system that makes use of impact resistant Fabric Shield from Wayne Dalton. Operation of the protective shade can be fully automated. The system protects against windborne debris and provides enhanced water performance.

### INNOFOAM

Closed-cell polyethylene and polypropylene foam profiles gently cradle and protect edges of windows and doors during shipping and handling. Said to cost less than engineered corrugated pieces, the profiles from Plastic Technology Inc. are also non-abrasive and require less labor to install.

### ENVIROSEALED

Designed to meet the growing demand for green products, the Envirosealed Windows program was developed to help window manufacturers and dealers sell the environmental benefits of products made with TruSeal Dura Platform spacers. The campaign, which focuses on how windows can save energy, money and the environment, features product literature, point-of-sale pieces, a dedicated Envirosealed-Windows.com Web site, multimedia offerings and promotional events.

### HAECO

The Versa-Glaze 1500 wet glazing table is suited for specialty shape frames or manufacturers looking for a lower-cost entry into liquid sealants. The machine utilizes linear servo controls to consistently provide a uniform bead of sealant as the operator slides the profile along the smooth-top table. The system is engineered for minimal installation requirements.

### GLASSLAM

The Air-Tight spacer series incorporates a flexible foam that provides tremendous warm-edge performance, according to the supplier. From Glasslam N.G.I. Inc., the line includes the Generic, a version featuring the EPDM rubber foam spacer with desiccant, adhesive and multi-layer metallized PET and acrylic backing, as well as Smart Edge, a one-step product that comes with a pre-applied secondary seal.

### ROYAL

Window Envelop Surround Systems combine Royal Mouldings' pediment and profile accessories to offer enhanced looks ranging from simple to sophisticated. A style guide catalog shows how such profiles as J-channel brickmould, Trimplank, sill nose, crown, dentils and shingle shapes create various patterns using the manufacturer's cellular PVC products.
